The verification gap

The problem isn't talent. It's proof.

FAST students are rated highly for a reason. Four years of a high-pressure grind build engineers who think critically, handle deadlines, and build real things. But that polish is lost in a stack of thousands of look-alike resumes.

The post-AI shift. Writing code is cheap now; AI can do it. What companies pay for is judgement, people who think critically and build what a model can't. That makes proof of genuine ability matter more, not less.

Why it persists

The gap won't close by itself

Student

built real work, but it stays invisible on a one-page CV

a one-page resume

can't be checked

Employer

wants proven skill, but can't check a claim at scale

Neither side can fix it alone, so hiring falls back on what's fast to check

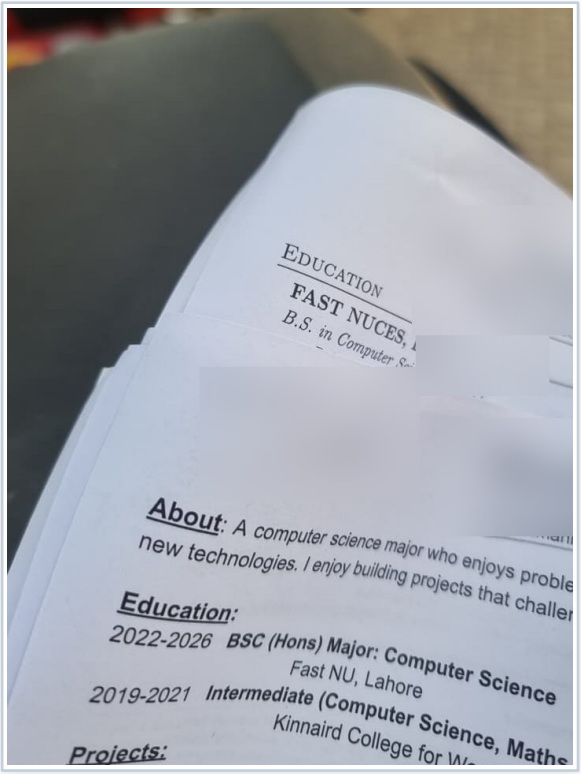

University name | **GPA** | **Keywords**

Quick to check, but they say little about what a student can actually do (Spence, 1973).

So a capable student stays invisible, and the employer keeps guessing.

Where this comes from

Why we're building this

CVs we found in the parking lot, after a job fair

We found a whole stack of these dumped in the parking lot after a job fair. Dozens of them, from strong FAST students, left in the dust with everyone else.

- **Brilliant students, undersold**

  They scramble for even unpaid internships, and settle for far less than they're worth.

- **Companies that pay for quality**

  They want architecture and judgement, not just code. Those minds sit in our classrooms.

FASTians don't deserve this.

The solution

A platform built around real work

One FAST-exclusive platform where students prepare, connect with their batch, show what they've built, and get hired on real work, not self-reported claims.

01

Prepare

A role-based roadmap, daily prep, streaks and a leaderboard.

02

Connect

FAST-only communities: course channels, project spaces and study groups.

03

Prove

An evaluation reads real work and reports strengths and the gaps to close.

04

Get hired

A marketplace to apply, interview and reach a confirmed hire.

Why FAST-only? Gathering verified FAST students is already 99% of the filtering. The platform does the final 1%, surfacing who's genuinely best, so a hirer searches proven talent, not a resume pile.

How it works

From hard work to the right hire

Students put in the work

- Explore fields and pick a roadmap you like
- Build a routine: checklists, streaks, daily prep
- Work with your batch: projects, feed, communities

FastHireX does the rest

- Reads your real work, code or documents
- Turns it into a clear picture of your skills
- Puts it in front of the people who matter

Employers hire smarter

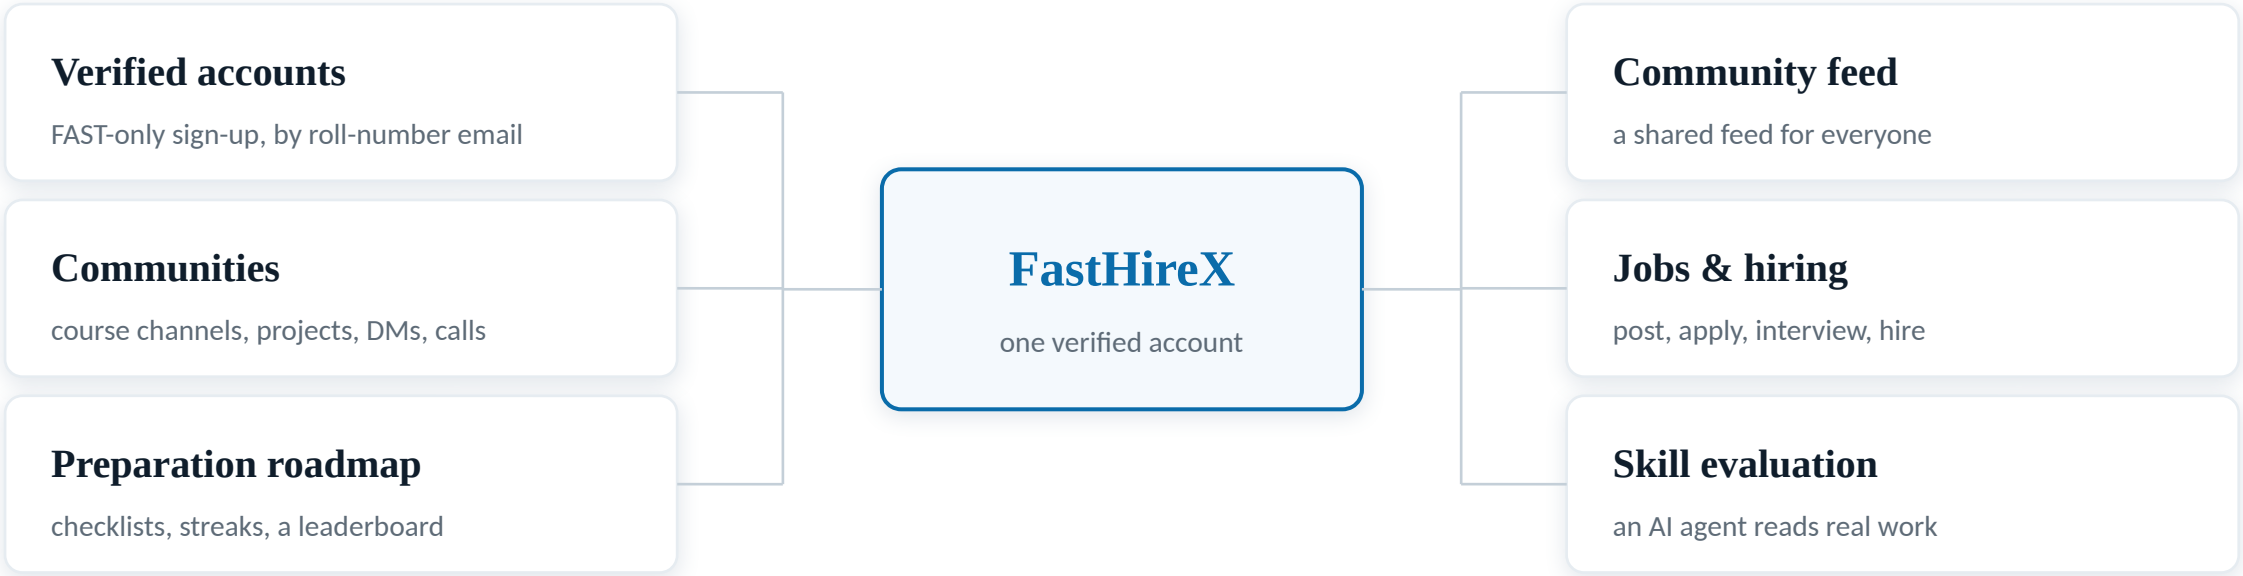

- Post what they're looking for
- See real insight into each candidate's work
- Shortlist, interview, hire

The result we narrow the search, connecting a student's real work to the employer it's for. You just work hard; we take it to the people who matter.

The engine

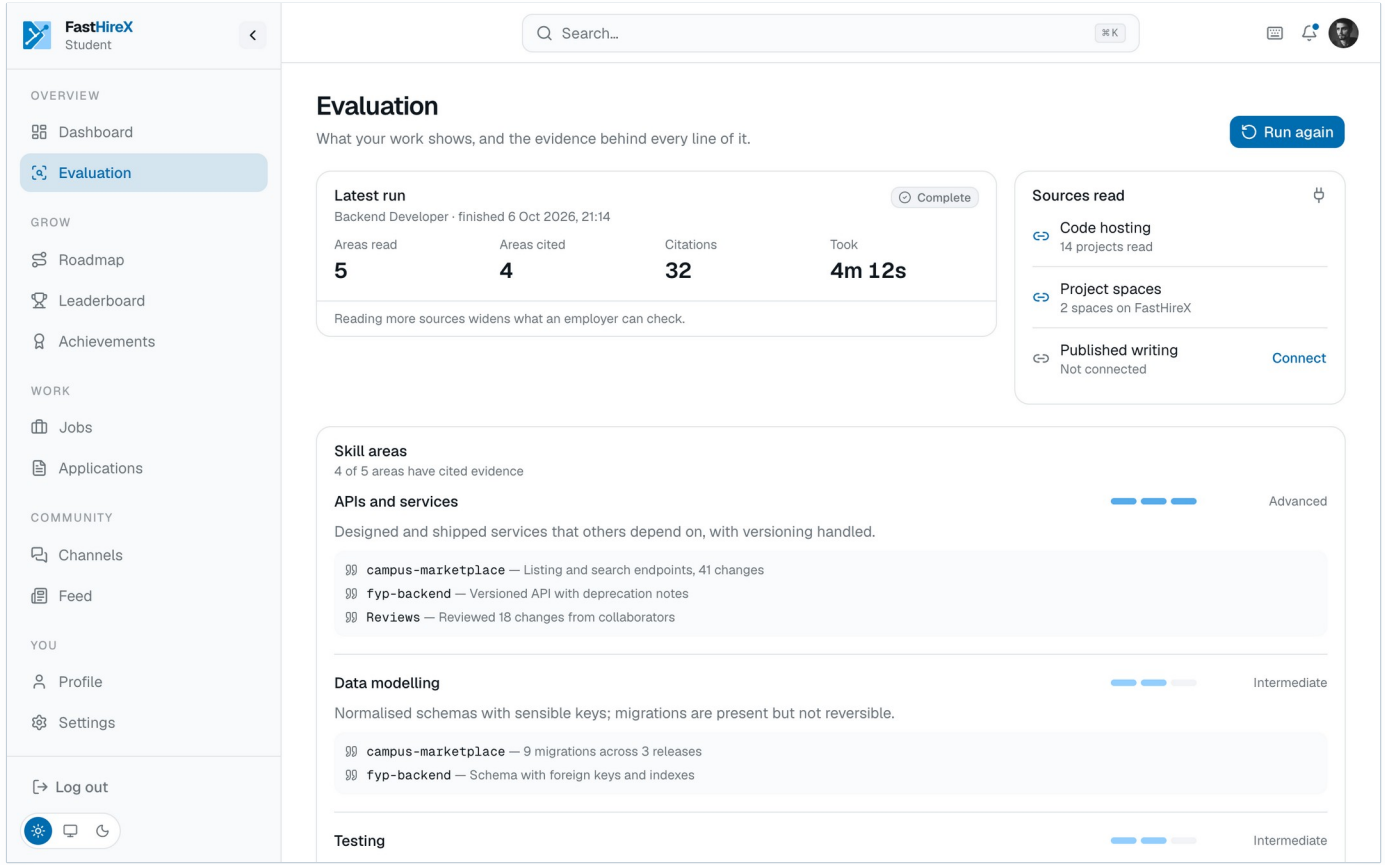

How it all fits together

Six parts behind one verified FAST account. Students prepare, connect with their batch, prove real work, and get hired, all in one place.

Under the hood one web app on a FastAPI backend and PostgreSQL, shared by students, employers and admins. Each part is built to work on its own.

The skill report

The evaluation screen, shown on sample data in our prototype

01 A clear report, broken into skill areas for the field a student picks.

02 Each area shows a proficiency level and the work it draws on.

03 It highlights the gaps to close next, which feed the roadmap.

04 Platform activity counts too: your pace of learning and consistency.

05 The score is shown next to its evidence, not as a number on its own.

Current state: *the screen is built on sample data; the live evaluation is the main build of FYP-II.*

The platform

More than a score, a place to get hired

Verified authentication

FAST-only sign-up by roll-number email and OTP, across all six campuses.

Preparation roadmap

Role-based checklists, daily practice questions, streaks and a leaderboard.

Community channels

Auto-joined by discipline and semester, with shared files, DMs, voice and video calls.

Community feed

A shared feed for students and employers, each clearly distinguished.

Hiring marketplace

Post jobs, search verified candidates, track a funnel, interview in-platform.

Skill evaluation

GitHub for technical students; uploaded documents for every other programme.

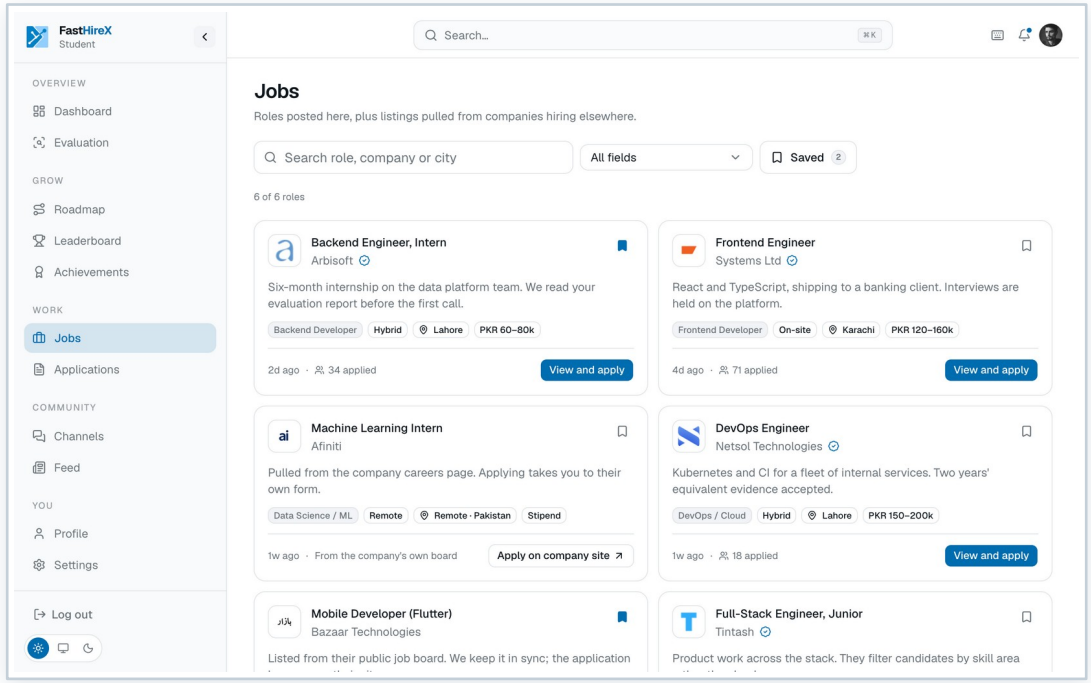

One ecosystem: prepare, prove, connect and get hired without leaving the platform.

The prototype

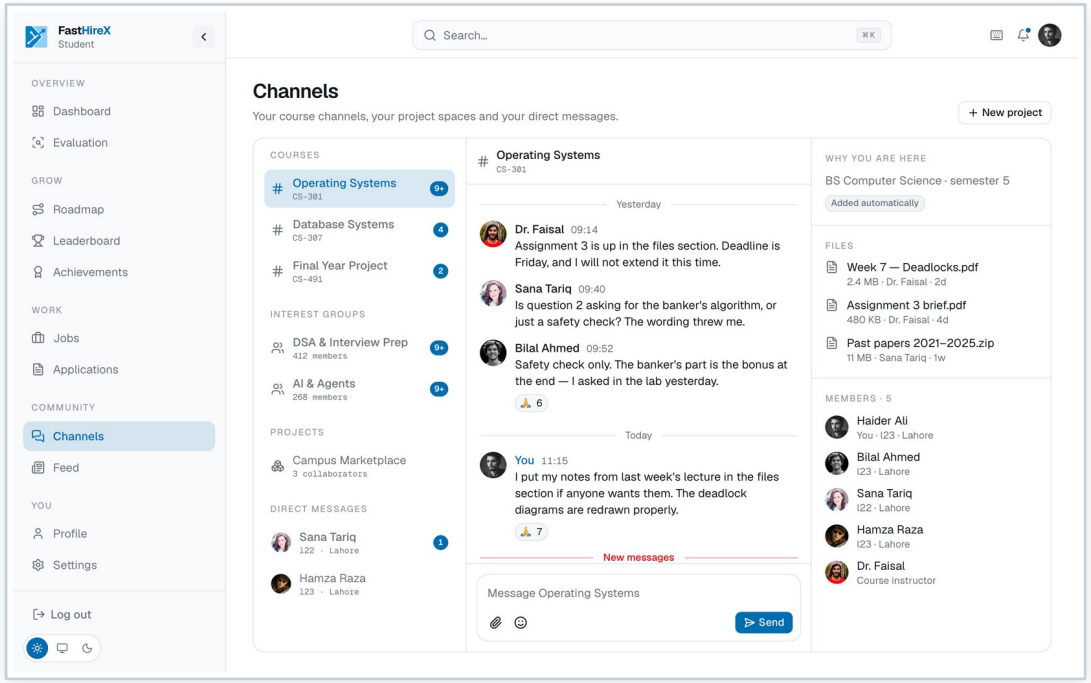

Inside the app

The student experience, already built in Next.js and shown here on sample data.

Jobs browse openings and apply

Community channels auto-joined by course

Already built: the full student web app in Next.js and shadcn/ui. Wiring it to the live backend is the work of FYP-II.

Jobs & hiring

A hiring flow built for trust

The employer moves each applicant forward through a tracked funnel, and the student is notified at every stage.

In-platform interviews

The interviewing stage is a video call held on the platform, with no external meeting link.

Blind mutual review

Neither side sees the other's review until both submit, which kills retaliatory ratings.

Reputation & hiring-rate

Earned from real history and shown on both the student's and the employer's profile.

The platform never holds money

Settled off-platform; the hire record is lightweight and explicitly non-legal.

Research-backed: blind release is motivated by reciprocity studies (Bolton et al.): when ratings are visible, they drift upward and stop being honest.

✓ Yes — Partial ✗ No

Handshake inspired us, but it isn't available in Pakistan. The tools students here use, Rozee.pk and LinkedIn, don't read real work or show the proof behind it.

System design

A clean, layered architecture

Client

Next.js + TypeScript web app · responsive · Electron desktop

Application

FastAPI: Auth · Roadmap · Community · Skill evaluation · Jobs · Notification

Data

PostgreSQL, one store across every service

Built on a modern stack: Next.js, FastAPI and PostgreSQL, with each feature kept modular so it can be built and tested on its own.

Proof over promises.

FastHireX turns a student's real work into talent an employer can trust.

The name scales with us. *'FAST' for FAST-NUCES today, 'Fast' for speed once we open to NUST, LUMS and beyond.*
